

Abstract

The objective of this bachelor thesis is the assesment during the course and the effect of cardiopulmonary resuscitation in Hospital Kolin, a.s.

The theoretical part contains chapters describing cardiopulmonary resuscitation according to the current recommendations, adult education, competencies of the general nurse and lifetime education in the organization in general.

The empiric part is focused on the didactic evaluation of the course as well as participants' evaluation, evaluation of skills and knowledge of the participants as the effectiveness indicator. Lastly, in the final part there are suggestions for changes which could optimize the course.

The target group was the participants of the CPR course – doctors and general nurses of Hospital Kolin, a.s.
